

Greetings and I hope your summer is going well! I would like to share an interesting Case Study with you, one that illustrates the capabilities of our PhysioTest subsidiary.

***Situation:** PhysioTest was approached by a client to develop and implement a test protocol for a multipolar neurological lead and implant tools. This lead will be used in a clinical application that does not have test guidelines in place.*

***Solution:** PhysioTest collaborated with the client to develop test methods and protocols that would simulate the clinical conditions and be accepted by regulatory agencies. This required assessing the clinical application, considering lead test standards from other applications, and developing a comprehensive approach for testing.*

***Outcome:** As a result of outsourcing to PhysioTest, the client has been able to complete the testing while focusing resources on development of its product and reducing the time to market.*

PhysioTest has conducted pre-DVT, DVT, accelerated aging DVT, and supplementary tests for the client.

With decades of medical device testing experience, look to PhysioTest as your independent test house to develop testing and test your product.

PhysioTest is a wholly owned subsidiary of Evergreen Medical. Evergreen provides complete product/system design and development of leads, catheters, steerable sheaths, introducers, implant tools and pulse generators for a variety of clinical applications. Both Evergreen and PhysioTest staff bring a deep understanding of clinical conditions and the application of medical devices.

Please contact us for more information on Evergreen or PhysioTest, or to discuss an upcoming project.

Sincerely
Randy Nelson
