

## Greetings from Evergreen Medical!

We would like to keep you updated on our growth, capabilities and key information about our company that may interest you and your colleagues.

- We have completed the move into our new facility, tripling our size from the previous location. In this new location we have expanded Evergreen's capabilities in concept and product development, expanded our pilot line and added a larger class 10,000 cleanroom for device assembly and packaging.
- We continue to strengthen our expertise in applied technology, research and development of catheter, guide, lead, pulse generator and stimulation/sensing devices.

Evergreen continues to bring an understanding of the clinical challenges in Cardiac, Vascular, Gastro and Neuro to each project we support and manage.

The Physiotest business has been growing! We have expanded our durability, reliability and materials testing capabilities to handle the DVT and pre-DVT requirements of catheters, guidewires and leads. In addition, we perform failure mode analysis on returned products. Consider Physiotest as your independent service to validate your testing or as a source for all your testing needs.

Our goal with all of these changes is to provide faster time to market for your new products, line extensions or product improvements.

We would love to hear from you. Please contact us for more information or to discuss an upcoming project.

Sincerely  
Randy Nelson
